

Systematic recycling

Öko Vario XL by Hailo

Be it flat screens or free-standing side-by-side fridge freezers in the American style, XL sizes are the expression of a modern lifestyle and are right on trend. They are also becoming more important when it comes to separating and recycling waste, and they are opening up new dimensions, as shown by the innovative Hailo Öko Vario XL. Clever and clean: the all-in-one solution means that waste can be sorted, disposed of and stored centrally in one place.

Whether in the kitchen, home or office, the rectangular housing made of anti-fingerprint stainless steel is an outstanding example of purist design and goes with any modern interior. The touchless sensor technology provides for maximum convenience: the flat, high-quality plastic lid opens automatically when a hand moves close to it. The lid then drops back down without making a noise thanks to the special lid-closing mechanism. It can also be operated manually at the press of a button.

A look inside reveals the practical benefits: as well as a 25-litre plastic bin for ordinary domestic waste, this versatile product also has a separately removable 4-litre biowaste container with carry handle and lid. The integrated pull-out recycling compartment with a 25-litre inner bin has room for returnable PET bottles, glass paper and other materials. Non-slip feet give the Öko Vario XL stability, making it is eminently suitable for everyday use.

Available size:
Height: 78.5 cm, width: 42.0 cm, depth: 31.5 cm
